

# Wall-Mounted Heat Pump

Series: LV - RXS

## Expertise and innovation: the Daikin difference.

LV Series systems feature a variable speed compressor, which have the required capacity to maintain a desired temperature while reducing energy consumption by more than 30% compared to conventional systems.

The motion detector (Intelligent Eye) automatically sets the unit to economy mode if no presence is detected over a 20-minute period. This function allows an additional 20% in energy savings for air conditioning and 30% for heating.
